

1 post doctoral position in Experimental Physics

One post-doctoral position for an experimentalist is available at the Laboratoire de Physique de l'Ecole Normale de Lyon (CNRS UR5672).

The research subject is the study of out of equilibrium fluctuations in highly confined fluids and polymers, within the ERC project OutEFLUCOP.

The duration of the position can be extended till 2years.

The net salary is about depending on previous experience : 24000 €/year

We need a good experimentalist strongly motivated in working with extremely low noise AFM, light scattering and dielectric techniques. No previous specific experience on these techniques is required only a good background in experimental physics, in instrumentation and/or in instrumentation design. Knowledge in optics, on thin film preparation, on polymer physics and nano-lithography are strongly appreciated.
