

## **1 post doctoral position for an experimentalist in Polymer Physics**

One post-doctoral position for an experimentalist is available at the Laboratoire de Physique de l'Ecole Normale de Lyon (CNRS UR5672) to work on a project in collaboration with Solvay.

The duration of the position is for the moment 1 year.

The research topic is the study of the dielectric properties of polymers in presence of strong mechanical stresses of the material.

The net salary is about 24000 €/year depending on previous experience.

We need a good experimentalist strongly motivated in developing new experimental techniques. No previous specific experience on the subject is required only a good background in experimental physics and instrumentation. Knowledge on thin film preparation, on polymer physics, dielectric and mechanical characterization of materials is highly appreciated.
