

Postdoctoral Position in Theoretical/Computational Biophysics

A postdoc position is open in the group of Shenshen Wang in the Department of Physics and Astronomy at UCLA (<http://shenshen-wang-group.physics.ucla.edu/index.html>).

Our group develops new theoretical approaches and employs computational methods to address prominent questions in evolving systems. In particular, we are exploring the mechanism and potential of statistical learning and memory formation in the adaptive immune system; this understanding will in turn motivate novel design of vaccine and therapy.

The ideal candidates should be curious, motivated, courageous, analytically and numerically capable.

Through carrying out interdisciplinary research on the vibrant campus, candidates would have abundant opportunities to make valuable contacts. Mentoring and grant writing experiences will also be offered.

The starting date is flexible.

Interested candidates are invited to apply at shenshen@physics.ucla.edu with a CV, including a publication list, contact information of three references, and a brief description of research interests and experiences. Informal inquiries are also welcome.
